Describe how proposed land use request will have direct or significant indirect benefit to the Trust and/or its Beneficiaries (Applicants & Lessees): _____

Our proposal to develop a small portion of the overall parcel for solar based power generation allows for a fairly high revenue stream per acre compared with other renewable energy proposals, such as biofuel crops. This also allows for future commercial development, homesteading or agricultural operations to happen on the bulk of the parcel. Additional photovoltaic panel placement will not cause significant view plane issues or environmental concerns caused by wind turbines. The design utilized by SunEdison does not require significant grading and would preserve natural topography and drainage patterns over the majority of DHHL's lands. Finally, these systems are easily removed at the end of the lease period and SunEdison would return the site to its original conditions.

The following authorized representative submits this request for use of Hawaiian home lands under non-homesteading purposes and acknowledges that:
