APPRENTICESHIP AGREEMENT PREFERENCE

Hawai‘i Revised Statutes §103-55.6 (ACT 17, SLH 2009) provides for a Hawai’i Apprenticeship Preference for public works contracts having an estimated value of $250,000.00 or more. The preference shall be in the form of a 5% bid adjustment applied to the Bidder’s amount for bidders that are parties to apprenticeship agreements. The estimated value of this public works contract is $250,000.00 or more and the apprenticeship agreement preference **shall** apply.

To be eligible for the preference, the Bidder shall:

1. Be a party to an apprenticeship agreement registered with the DLIR at the time the bid is made for each apprenticeable trade the Bidder will employ to construct the public works project for which the bid is being made.

    a. The apprenticeship agreement shall be registered and conform to the requirements of HRS Chapter 372.

    b. Subcontractors do not have to be a party to an apprenticeship agreement for the Bidder to obtain the preference.

    c. The Bidder is not required to have apprentices in its employ at the time the bid is submitted to qualify for the preference.

    d. If a Bidder’s employee is multi-skilled and able to perform work in more than one trade (for example, a project requires a carpenter and a laborer, and the employee is a carpenter, but is also able to perform the work of a laborer), the Bidder need only be a party to the carpenter’s apprenticeship agreement and does not need to be a party to the laborer’s apprenticeship agreement in order to qualify for the preference. The Bidder is not “employing” a laborer, only a carpenter, and so only needs to be a party to the carpenter’s apprenticeship agreement.

    e. Qualification for the preference is given on a project-by-project basis and depends upon the specific offer for a specific project. A Bidder’s employees may vary from project to project and may qualify for the preference on one project but may not qualify on another project. For example, on one project, if the Bidder only employs carpenters to perform work in the carpentry and labor trades, then the Bidder only needs to be a party to the carpenter’s apprenticeship agreement in order to qualify for the preference. However, on another project if the same Bidder employs both carpenters and laborers, then the Bidder will not qualify for the preference if the Bidder is only a party to the carpenter’s apprenticeship agreement and not the laborer’s apprenticeship agreement.

2. State the trades the Bidder will employ to perform the work;

3. For each trade to be employed to perform the work, the Bidder shall submit a completed signed original *CERTIFICATION OF BIDDER'S PARTICIPATION IN APPROVED APPRENTICESHIP PROGRAM UNDER ACT 17* (*Certification Form 1)* verifying the participation in an apprenticeship program registered with the State Department of Labor and Industrial Relations (DLIR);

4. The *Certification Form 1* shall be authorized by an apprenticeship sponsor of the DLIR list of registered apprenticeship programs. The authorization shall be an original signature by an authorized official of the apprenticeship sponsor; and

5. The completed *Certification Form 1* for each trade must be submitted by the Bidder with the offer. A facsimile or copy is acceptable to be submitted with the offer; however, the completed **signed original** must be submitted within five (5) working days of the due date of the offer. If the signed original is not received within this timeframe, the preference may be denied. Previous certifications shall not apply.

Failure to comply with ALL of the conditions noted above, without exception, shall disqualify the Bidder from qualifying for, and thus receiving, benefit of the Hawai'i Apprenticeship Preference.

The *Certification Form 1* and the List of Construction Trades in Registered Apprenticeship Programs is available on the DLIR website at: http://labor.hawaii.gov/wdd/.

Upon receiving *Certification Form 1*, the DHHL will verify with DLIR that the apprenticeship program is on the list of apprenticeship programs registered with the DLIR. If the program(s) are not confirmed by the DLIR, the Bidder will not qualify for the preference.

If the Bidder is certified to participate in an apprenticeship program for each trade which will be employed by the Bidder for the project, a preference will be applied to decrease the Bidder's total bid amount by five per cent (5%) for evaluation purposes.

Should the Bidder qualify for other preferences, all applicable preferences shall be applied to the bid amount.

While preference for Hawai'i Apprenticeship will be taken into consideration to determine the low Bidder, the contract awarded shall be the original bid amount, exclusive of any preferences. The preference is only for evaluation purposes.

The Bidder hereby certifies that it will employ the following apprenticeable trades to perform the work for this project:

LIST OF APPRENTICEABLE TRADES TO BE EMPLOYED

TRADE	APPRENTICESHIP PROGRAM SPONSOR

(Add additional sheets if necessary)

ALL JOINT CONTRACTORS OR SUBCONTRACTORS TO BE ENGAGED ON THIS PROJECT

The Bidder certifies that the following is a complete listing of all joint Contractors or Subcontractors covered under Chapter 444, Hawai‘i Revised Statutes, who will be engaged by the Bidder on this project to perform the nature and scope of work indicated pursuant to Section 103D-302, Hawai‘i Revised Statutes, and understands that failure to comply with this requirement shall be just cause for rejection of the bid.

The Bidder further understands that only those joint Contractors or Subcontractors listed shall be allowed to perform work on this project and that all other work necessary shall be performed by the Bidder with his own employees. If no joint Contractor or Subcontractor is listed, it shall be construed that all of the work shall be performed by the Bidder with his own employees.

The Bidders must be sure that they possess and that the Subcontractors listed in the bid possess all the necessary licenses needed to perform the work for this project. The Bidder shall be solely responsible for assuring that all the specialty licenses required to perform the work are covered in his bid.

The Bidder shall include the license number of the joint Contractors or Subcontractors listed below. Failure to provide the correct names and license numbers as registered with the Contractor’s Licensing Board may cause rejection of the bid submitted.

Complete Firm Name of Joint Contractor or Subcontractor	License Number	Hawai‘i Tax ID Number	Nature and Scope of Work to be Performed

(Add additional sheets if necessary)

METHOD OF AWARD

The Bidder is required to bid on the entire project. The low Bidder shall be determined by the procedures outlined in items 1) through 4) below:

1. Prior to opening of bids, the State will determine the amount of funds available for the project. This amount will be designated the "control amount". The control amount shall be announced at, and prior to the opening of bids.

2. The Base Bid and Alternate, if any, of each Bidder will be adjusted to reflect the applicable preferences in accordance with Chapter 103D, HRS. The Alternate, if any, will then be added to the Base Bid and compared with the control amount.

3. The low Bidder shall be the Bidder having the lowest aggregate amount, within the control amount (after application of the various preferences), for the Base Bid plus the Alternate, if any.

4. If adding the Alternate, if any, would make the aggregate amount exceed the control amount for all Bidders, the low Bidder shall be the Bidder having the lowest Base Bid after application of the various preferences.

   It is further understood and agreed that:

5. The Chairman reserves the right to reject any and/or all bids and waive any defects when, in his opinion, such rejection or waiver will be in the best interest of the State.

6. After determining the low Bidder, an award may be made either on the amount of the Base Bid alone, or including the Alternate (exclusive of preferences), if:

   a. It is in the best interest of the State;

   b. Funds are available at time of the award; and

   c. The combination of the Base Bid plus Alternate does not change the apparent low Bidder.

7. In the event the Base Bid for all Bidders exceed the control amount, the Chairman reserves the right to negotiate with the lowest responsible and responsive Bidder to award a contract within available funds.

8. In the event the award is made for the Base Bid alone, the Chairman reserves the right to amend the contract at a later date to include the Alternate should funds subsequently become available.

OTHER CONDITIONS

1. The liquidated damages per working day for failure to complete the work on time have been determined and are noted in the Special Conditions of the sample contract.

2. By submitting this bid, the undersigned is declaring that his firm has not been assisted or represented on this matter by an individual who has, in a State capacity, been involved in the subject matter of this contract in the past one (1) year.

3. By submitting this bid, the undersigned is declaring that Bidder's own organization will perform at least 20% of the contractor's work. For the purposes of this section, the Contractor's work is defined as: direct cost labor for contractor's forces; direct cost materials installed by the contractor's direct cost labor force; direct cost equipment, either owned or leased, used by the contractor's direct cost labor force; and field overhead cost to include: field supervision, field office trailer (if any), field office equipment and supplies, etc.

4. Upon the acceptance of the bid by the Chairman, the undersigned must enter into and execute a contract for the same and furnish a Performance and Payment Bond, as required by law. These bonds shall conform to the provisions of Sections 103D-324 and 325, Hawai‘i Revised Statutes, and any law applicable thereto.

5. The quantities given herewith are approximate only and are subject to increase or decrease.

6. The estimated quantities shown for items for which a UNIT PRICE is asked in this bid are only for the purpose of comparing on a uniform basis bids offered for the work under this contract. No claim shall be filed for anticipated profit or loss because of any difference between the quantities of the various classes of work done or the materials and equipment actually installed and the said estimated quantities. Payment on UNIT PRICE items will be made only for the actual number of units incorporated into the finished project at the contract UNIT PRICE.

7. If the product of the UNIT PRICE BID and the number of units does not equal the total amount stated by the undersigned in the Bid for any item, it will be assumed that the error was made in computing the total amount. For the purpose of determining the lowest Bidder, the stated UNIT PRICE alone will be considered as representing the Bidder's intention and the total amount bid on such items shall be considered to be the amount arrived at by multiplying the UNIT PRICE by the number of units.

8. Certification for Safety and Health Programs for Bids in Excess of $100,000. In accordance with Sections 103D-327 and 396-18, Hawai‘i Revised Statutes, by submitting this bid, the undersigned certifies that his firm will have a written Safety and Health Plan for this project that will be available and implemented by the Notice to Proceed date of this project. Details of the requirements of this plan may be obtained from the Department of Labor and Industrial Relations, Occupational, Safety and Health Division.

9. Any contract arising out of this offer is subject to the approval of the Department of the Attorney General as to form, and to all further approvals, including the approval of the Governor, required by statute, regulation, rule, order, or other directive.

Receipt of the following addenda issued by the Department is acknowledged by the date(s) of receipt indicated below:

SPECIAL CONDITIONS

SC-46 FINAL SETTLEMENT OF CONTRACT

The following shall be made additional conditions of compliance with DHHL Construction General Condition 7.33:

1. The CONTRACTOR shall coordinate with all government agencies and utility companies on behalf of DHHL to obtain letter(s) from each respective government agency or utility company indicating that acceptance of the contract work for the project has been granted to DHHL. Copies of the letters shall be submitted to DHHL.
2. Signature, execution, and return of the "Record Drawing" Title tracings.

Payment for all work required to comply with the above items will not be paid for separately but shall be considered incidental to the various contract items.

SC-47 SHOP DRAWINGS AND OTHER SUBMITTALS

The CONTRACTOR is required to submit a complete list of shop drawings and other submittals to the Construction Manager, for DHHL and the consultant team's review, by one week after the notice to proceed (NTP) is given, or at the pre-construction meeting, whichever comes first.

The CONTRACTOR is then required to submit all submittals and shop drawings that are listed within ONE MONTH after the notice to proceed is given. The CONTRACTOR will not be given schedule or cost considerations for delay of materials if shop drawings or submittals are not submitted by this time.

SC-48 PROJECT SIGNS

The CONTRACTOR shall furnish, erect, maintain and remove one project sign each, for DHHL and USDA.

The project signboard shall be 3/4 inch thick, "AC" exterior grade fir plywood, 4 feet in height and 7 feet long each. All lettering type and size and color selection shall be as specified by DHHL and USDA (refer to Exhibit A).

All paints used shall be exterior enamel paints manufactured either by Ameritone-Devoe, Boysen, DuPont, Dutch Boy Fuller-O'Brien, Glidden, Pittsburg, Sherwin—Williams, Sinclair, or approved equal, and made primarily for the purpose for which they are used, and shall be prepared and applied strictly in accordance with the manufacturer's directions. Signs shall be painted with one prime coat and two finish coats.

Final layout shall be based upon sign plans submitted by the CONTRACTOR and approved by the DHHL.

The sign shall be maintained in good condition throughout the progress of the work until final completion of the project. The project sign shall be erected within five (5) days after approval of the sign layout. After the final approval of the construction work by the DHHL,

the project sign shall be removed from the site and shall become the property of the CONTRACTOR.

Payment will be made for one project sign painted, with lettering specified by DHHL, in place complete (see attachment). Payment for sign removal shall be incidental to said item.

SC-49 COMPLIANCE WITH THE USDA LETTER OF CONDITIONS

The CONTRACTOR shall comply with all conditions prescribed in the USDA Letter of Conditions to the extent allowed by law. Including, but not limited to, the following:

Excerpted from the USDA Letter of Conditions (LOC), dated: August 26, 2016:

"At the conclusion of the proposal's environmental review process, specific action(s) were determined necessary to avoid or minimize adverse environmental impacts. As outlined in the Environmental Report dated February 2016, the following actions are required for successful completion of the project and must be adhered to during project design and construction:

1. **Historic and Cultural Resources:**

   The pohaku in Kalama'ula is located in the middle of the roadway. Many years ago, construction workers attempted to remove it to build Kalaniana'ole Avenue. They were unsuccessful and built the road around the stone. While construction is not proposed near the pohaku, increased traffic can be expected on the roadway when construction vehicles must pass it to get to DHHL Water System facilities. Contractors shall be advised to avoid the pohaku.

   As espoused by various mo'olelo, the area, in general, has a mystical past and retains some supernatural qualities. To respect the spiritual connections that people have with the 'aina, any major event or construction related activity shall be preceded by traditional Hawaiian blessing ceremony performed by a kahuna (priest or priestess) or kahu pule (minister/preacher).

   The sites that were identified will be recorded and mitigation measures shall be approved by the State Historic Preservation Officer (SHPO) and shall be implemented. The historic properties (particularly those in Kalama'ula) will be marked prior to construction to ensure disturbance does not occur. For inadvertent finds during construction, the construction documents shall include a provision that, should any remains such as artifacts, burials, or concentrations of shell or charcoal be encountered during construction activities, work will cease immediately in the immediate vicinity of the find, and the find will be protected. The contractor shall immediately contact the State Historic Preservation Division, which will assess the significance of the find and recommend appropriate mitigation measures, if necessary.

   - Record the 17 sites that have been identified in the Archaeological Inventory Survey.
   - Avoid archeological sites. The exact location of the roadways and water line will be adjusted during the design and construction phases to avoid impacting archaeological sites identified for preservation.

- Mark archaeological sites identified for preservation prior to construction to ensure disturbance does not occur.
- Stop work and notify SHPO if previously unidentified cultural and archaeological resources are discovered during construction activities for significance assessment of the find and for recommendation of appropriate mitigation measures.
- Major events or construction related activities will be preceded by traditional Hawaiian blessing ceremony in respect to the spiritual connections between the 'aina and its people.
- Avoid the large, naturally occurring pohaku (boulder) located within Kalama'ula along Kalaniana'ole Avenue.

2. Biological Resources:

To ensure that threatened and endangered species are not likely to be adversely affected by the proposed action, the following mitigation measures shall be included in the letter of conditions for financial assistance.

3. Transport of New Terrestrial Invasive Plant Species Minimization Measures:

To avoid the unintentional introduction or transport of new terrestrial invasive plant species to Moloka'i during this Project, all construction equipment and vehicles arriving from outside of Moloka'i shall be washed and inspected, and, when possible, raw materials (e.g., gravel, rock, and soli) shall be purchased from a local supplier on Moloka'i to avoid Introducing non-native plant species not present on the Island.

4. Hawaiian hoary bat:

The Hawaiian hoary bat is known to occur across a broad range of habitats throughout the State of Hawaii. This bat roosts in both exotic and native woody vegetation and, while foraging, leaves young unattended in "nursery" trees and shrubs. If trees or shrubs suitable for bat roosting are cleared during the Hawaiian hoary bat breeding season (June 1 to September 15), there is a risk that young bats that cannot yet fly on their own could inadvertently be harmed or killed. Woody plants greater than 15 feet tall shall not be removed or trimmed during the bat breeding season.

Additionally, Hawaiian hoary bats forage for insects from as low as three feet to higher than 500 feet above the ground. When barbed wire is used in fencing, Hawaiian hoary bats can become entangled. Barbed wire shall not be used for fencing.

- There shall be no clearing or grubbing of vegetation over 15 feet tall during the breeding season (June 1 through September I 5).
- Barbed wire shall not be used for any fencing (temporary or permanent) and if a bat arrives in the construction area after work begins, work shall cease until the bat leaves the on its own accord.

5. Nene:

Nene are known to occupy various habitat and vegetation community types ranging from coastal dune vegetation and nonnative grasslands (such as golf courses, pastures, and rural areas) to sparsely vegetated low- and high-elevation lava flows, mid-elevation

native and non-native shrubland, cinder deserts, native alpine grasslands and shrublands, and nonnative alpine shrubland-woodland community habitats. There is the potential for disturbance activities, including noise, to reduce the reproductive success or survival of nene. Nene have an extended breeding season with eggs reported from all months except May, June, and July, although the majority of nene in the wild nest during the wet (winter) season between October and March. Nesting peaks in December and most goslings hatch from December to January. Nene nest on the ground in a shallow scrape in the dense shade of a shrub or other vegetation. In order to avoid impacts to nene, a qualified biologist shall survey the project area prior to the initiation of any work and conduct nest searches for nene if the project will occur during the breeding season. If a nest is discovered, work should cease immediately and our office be contacted for further guidance. A 100-foot (30m) buffer should be established and maintained around all active nests and broods until the goslings have fledged. No disruptive activities shall occur within this buffer. If a nene appears during ongoing work, all activity shall be temporarily suspended until the animal leaves on its own accord.

- A survey shall be conducted by a qualified biologist around the construction sites prior to the initiation of any work or after any subsequent delay of work for three or more days once foraging/loafing nene have been observed at the project site. If a nest is discovered within a radius of 100 feet of the project area, all work will cease immediately and the U.S. Fish and Wildlife Service shall be contacted within 24 hours.
- Projects shall be temporarily suspended if a nene appears within 100 feet of ongoing work and will not resume until the nene has left on Its own accord.

6. Seabirds:

Hawaiian petrels and Newell's shearwaters (collectively known as seabirds) may transit over the project area when flying between the ocean and nesting sites in the mountains during their breeding season (March through November). Seabird fatalities resulting from collisions with artificial structures that extend above the surrounding vegetation have been documented in Hawaii where high densities of transiting seabirds occur. Additionally, artificial lighting such as flood lighting or for construction work and site security, can adversely impact seabirds by causing disorientation which may result in collision with utility lines, buildings, fences and vehicles. Fledging seabirds are especially affected by artificial lighting and may exhaust themselves while circling the light sources and become grounded. Too weak to fly, these birds become vulnerable to depredation by feral predators such as small Indian mongoose (Herpestres auropunctatus), cats (Fells catus), and dogs (Canlsfamillaris). Night work requiring artificial illumination shall be avoided during the seabird fledging season (approximately September 15 through December 15).

- No nighttime construction shall occur during the seabird fledging period (September 15 through December 15) and outdoor lighting installations shall be designed to minimize glare and constructed in a manner that fully shields lighting sources and directs light downwards. The U.S. Fish and Wildlife

Service shall be consulted for additional minimization measures regarding seabirds and lights if night work is proposed after the fledging season (December 16 through September 14).

7. Blackburn's sphinx moth:

The Blackburn's sphinx moth may be in the vicinity of the proposed project area. Adult moths feed on nectar from native plants, including beach morning glory (Ipomoea pes-caprae), lliee (Plumbago zeylanica), and malapllo (Capparis sandwichlana); larvae feed upon non-native tree tobacco (Nicotiana glauca) and native aiea (Nothocestrum latifolium). To pupate, the larvae burrow into the soil and can remain in a state of torpor for up to a year {or more) before emerging from the soli. Soil disturbance can result in death of the pupae. A qualified biologist shall survey areas of proposed construction activities for Blackburn's sphinx moth and its host plants prior to work initiation. Surveys shall be conducted during the wettest portion of the year (usually November-April or several weeks after a significant rain) and immediately prior to construction. Surveys should Include searches for eggs, larvae, and signs of larval feeding (chewed stems, frass, or leaf damage). Any host plants of Blackburn's sphinx moth identified should not be cut or disturbed without further discussions with the U.S Fish and Wildlife Service. If moths or their host plants are found during the survey, the U.S Fish and Wildlife Service shall be contacted for additional guidance to avoid take.

- A biologist shall survey the project area for the presence of larval host plants. If larval host plants are discovered, the U.S Fish and Wildlife Service shall be contacted for further guidance prior to construction activities.
- Once an area has been cleared as part of the project construction, the area shall be kept clear of non-native species until construction activities are complete.

8. Guidance for Solar Facilities:

Please note that some photovoltaic systems on the United States mainland are resulting in impacts to migratory waterfowl and shorebirds. This source of mortality has been described previously (Mccrary et. al. 1986), and recent impacts are being observed at solar facilities in California, including the Desert Sunlight Solar Farm and Genesis Solar Energy Project. Birds have been inadvertently attracted to these sites due to solar panels' resemblance to water and their proximity to important migratory flyways (Donnelly-Shores 2013 and Clarke 2013). Once attracted, collisions with the solar arrays have resulted in injuries and mortalities; once grounded, birds are also subject to predation (Kagan et. at. 2014). While attraction to solar arrays has not yet been documented in Hawaii, the State harbors a significant diversity of water bird and shorebird species, including the federally endangered Hawaiian coot (Fulica alai), Hawaiian stilt (Himantopus mexicanus knudseni), Hawaiian moorhen (Gallinula chloropus), Hawaiian duck (Anas wyvilliana), and Hawaiian goose. Personnel at the solar site be educated about the potential for birds to be attracted and Inadvertently harmed. If monitoring indicates that species are occurring at the photovoltaic system, or additional information about the facility's impacts to native Hawaiian species

becomes available. the U.S Fish and Wildlife Service shall be contacted for further guidance regarding minimizing impacts.

9. Fugitive Dust Mitigation:

During construction a dust control measure shall be implemented. Frequent water sprinkling may be the most effective dust control measure given the size of the sites and the type and scale of proposed improvements. Additional measures could include:

- Landscaping and rapid covering of bare areas;
- Disturbing only the areas of construction that are in the immediate zone of construction to limit the amount of time that the areas will be subject to erosion:
- Provisions for adequate dust control measures during weekends, after hours, and before daily start of construction activities:
- Installation of appropriate structural controls in areas of disturbance; and/or
- Siting of staging areas on impervious surface when possible.

Pollution control measures shall comply with Hawai'i Administrative Rules, Title 11, Chapter 60.1, Air Pollution Control regulations of the DOH.

10. Asbestos Containing Materials (ACM) Mitigation:

Certified contractors shall be involved in the inspection, project design, and abatement of ACM. The Asbestos Abatement Office of the DOH-Indoor and Radiological Health Branch shall be kept apprised of the Project and shall be engaged as necessary once the Project reaches the design phase."

SC-50 AS-BUILT DRAWINGS / RECORD DRAWINGS

As-Built Drawings:

The CONTRACTOR shall provide as-built drawings. The As-Built drawings shall show the actual construction so that any future renovations or tie-ins can be anticipated accurately.

The CONTRACTOR shall record all deviations from the drawings that were authorized by the Project Manager onto the copy of the field plans. The changes shall be recorded immediately after they have been constructed in place to assure they are recorded before they are forgotten.

The CONTRACTOR shall record the changes onto the field office plans using a red pencil. The CONTRACTOR shall stamp, sign and date each sheet of the field office plans. The stamp shall contain the words: "AS-BUILT DRAWINGS' and include a statement signed by the CONTRACTOR certifying that the drawings on the sheet accurately and completely reflect and show the actual as-built construction. The stamp format and wording shall be submitted to the Project Manager for prior approval.

The CONTRACTOR shall submit the marked-up field office plans for the project, stamped, signed and dated, to the Project Manager after the improvements for each respective portion of the project have been completed.

STATE OF HAWAII

SPECIAL CONDITIONS

Record Drawings:

All changes shown on the As-Built drawings will be recorded om the original tracings, which will then become the Record Drawings. The Consultant(s) shall be responsible for preparing the Record Drawings. The Consultant(s) shall stamp, sign and date the Title Sheet tracing of the Record Drawings. The stamp shall contain the words "Record Drawings."

The CONTRACTOR shall review the changes made and certify the Record Drawings by signing and dating the Record Drawing Title Sheet tracing where indicated. Any deviations from the plans determined by the Project Manager to missing from, incomplete, or inaccurately drawn on the As-Built Drawings shall be corrected on the Record Drawing tracings by the State and the CONTRACTOR shall be charged for the services. The State will keep a record of the associated cost impacts and deduct them from the Contract price.

Payment for all work required to comply with this item will not be paid for separately but shall be considered incidental to the various Contract items.

SC-51 CONSTRUCTION MANAGER AND ENGINEER INSPECTIONS

The DHHL will engage the Engineer and the Construction Manager (CM) for limited construction observation and/or full observation to supplement the inspections performed or required by the State and/or the County.

CM's and Engineer's authority shall be as described in DHHL Construction General Condition 5.4.

SC-52 COMPENSATION FOR REMOVAL OF ABANDONED VEHICLES, TRASH OR DUMPED ITEMS

Any and all abandoned vehicles, boats or other means of transportation and all appliances and discards of every description found within 5-feet of the actual work limits during the duration of this contract shall be promptly and totally removed from the site. The cost shall be considered incidental to the various Contract items.

The CONTRACTOR is solely responsible for taking precautions to prevent unauthorized access during working and non-working hours to eliminate illegal dumping within these areas during the entire duration of the project. Refer to DHHL Construction General Conditions 4.9.1.2, 7.30 and 7.34.

SC-53 CONNECTION TO EXISTING WATER MAIN

The CONTRACTOR shall coordinate and meet with DHHL and the Department of Water Supply (DWS), County of Maui (when affecting the County water supply) to schedule and minimize water system shut down(s). The CONTRACTOR shall coordinate all scheduling of shut downs with the DHHL. Shut down times shall be limited to a maximum of 6-hour durations; however, this duration may be reduced by DHHL subject to water service continuity requirements and if so the CONTRACTOR shall comply at no additional cost to the State.

STATE OF HAWAII

SPECIAL CONDITIONS

The CONTRACTOR shall notify all users affected by the disruption in water service in writing a minimum of two (2) weeks prior to any shut down and provide copies of the notification(s) to the Project Manager.

Payment for all work required to comply with the above items will not be paid for separately but shall be considered incidental to the various contract items for water system construction.

SC-54 KALAE HIGHWAY RESURFACING (BY OTHERS)

State of Hawaii, Department of Transportation, Highways Division, Maui District has contracted to have Kalae Highway resurfaced. The Contractor shall prioritize his schedule to perform work affecting Kalae Highway prior to the State's resurfacing work. Once resurfaced, there will be a one (1) year moratorium where disturbance to the Kalae Highway pavement will not be permitted.

PART 2 - PRODUCTS

2.01 PRESSURE REDUCING VALVE

A. This valve shall maintain a constant downstream pressure regardless of changing flow rate and/or inlet pressure.

B. The valve shall be hydraulically operated, single diaphragm-actuated and globe pattern. The valve shall consist of three major components: the body with seat installed, the cover with bearings installed and the diaphragm assembly. The diaphragm assembly shall be the only moving part and shall form a sealed chamber in the upper portion of the valve, separating operating pressure from line pressure. Packing glands and/or stuffing boxes are not permitted and there shall be no pistons operating the main valve or pilot controls.

C. No separate chambers shall be allowed between the main valve cover and body. Valve body and cover shall be of cast material. No fabrication or welding shall be used in the manufacturing process.

D. The valve shall contain a resilient, synthetic rubber disc, with a rectangular cross-section contained on three and one-half sides by a disc retainer, forming a tight seal against a single removable seat insert. No O-ring type disc (circular, square or quad type) shall be permitted as the seating surface.

The disc guide shall be of the contoured type to permit smooth transition of flow and shall hold the disc firmly in place. The disc retainer shall be of a sturdy one-piece design capable of withstanding opening and closing shocks.

It must have straight edge sides and a radius at the top edge to prevent excessive diaphragm wear as the diaphragm flexes across this surface. No hourglass-shaped disc retainers shall be permitted and no V-type or slotted type disc guides shall be used.

E. The diaphragm assembly containing a non-magnetic 303 stainless steel stem of sufficient diameter to withstand high hydraulic pressures, shall be fully guided at both ends by a bearing in the valve cover and an integral bearing in the valve seat. No center guides shall be permitted. The stem shall be drilled and tapped in the cover end to receive and affix such accessories as may be deemed necessary. The diaphragm assembly shall be the only moving part

and shall form a sealed chamber in the upper portion of the valve separating operating pressure from line pressure.

F. The diaphragm shall consist of nylon fabric bonded with synthetic rubber compatible with the operating fluid. The center hole for the main valve stem must be sealed by the vulcanized process or a rubber grommet sealing the center stem hole from the operating pressure. The diaphragm must withstand a Mullins Burst Test of a minimum of 600 psi per layer of nylon fabric and shall be cycle tested 100,000 times to insure longevity. The diaphragm shall not be used as the seating surface. The diaphragm shall be fully supported in the valve body and cover by machined surfaces which support no less than one-half of the total surface area of the diaphragm in either the fully open or fully closed position.

G. The main valve seat and the stem bearing in the valve cover shall be removable. The cover bearing and seat shall be threaded into the cover and body. The lower bearing of the valve stem shall be contained concentrically within the seat and shall be exposed to the flow on all sides to avoid deposits.

   To insure proper alignment of the valve stem, the valve body and cover shall be machined with a locating lip. No “pinned” covers to the valve body shall be permitted.

   Cover bearing, disc retainer and seat shall be made of the same material. All necessary repairs and/or modifications other than replacement of the main valve body shall be possible without removing the valve from the pipeline. Packing glands and/or stuffing boxes shall not be permitted and components including cast material shall be of North American manufacture.

H. The valve manufacturer shall be able to supply a complete line of equipment from 1 1/4” through 24” sizes and a complete selection of complementary equipment. The valve manufacturer shall also provide a computerized cavitation chart which shows flow rate, differential pressure, percentage of valve opening, Cv factor, system velocity and if there will be cavitation damage.

I. The valve shall be a Cla-Val Model No. 90-01 ABS KCX X101 Pressure Reducing Valve as manufactured by Cla-Val Co. or approved equal.

2.04 PILOT CONTROL SYSTEM

A. The pressure reducing pilot control shall be a direct-acting, adjustable, spring-loaded, normally open, diaphragm valve designed to permit flow when controlled pressure is less than the spring setting. The pilot control is held open by the force of the compression on the spring above the diaphragm and it closes when the delivery pressure acting on the underside of the diaphragm exceeds the spring setting. The pilot control system shall include a fixed orifice. No variable orifices shall be permitted. The pilot system shall include an opening speed control.

B. The pilot control shall have a second downstream sensing port which can be utilized to install a pressure gauge.

C. A full range of spring settings shall be available in ranges of 0 to 450 psi.

D. A direct factory representative shall be made available for start-up service, inspection and necessary adjustments.

PART 3 - EXECUTION

3.01 Construction and installations shall conform to the applicable sections of the Water System Standards, Department of Water Supply, County of Maui, State of Hawaii, 2002, as amended.

END OF SECTION

SECTION 15131 – MOTOR FOR DEEP WELL PUMP

B. Scope: The work in this section shall include furnishing of all labor, materials, tools, and equipment necessary to install, in place tested and complete, the vertical electric motor for the existing deep well pumping unit as shown on the plans.

PART 2 – PRODUCTS

2.1 MOTOR

The motor shall be a vertical hollow shaft, 200 horsepower, 1800 rpm, 3-phase, 60 hertz, 460-volt, cast iron, normal torque, premium efficiency, low starting current, squirrel cage induction motor with Weather Protected Type 1 enclosure and shall conform to the standards of the National Electrical Manufactures Association and the American Institute of Electrical Engineers. Motor shall be General Electric, US Motors, or approved equal.

The motor shall be designed to operate at an ambient temperature of 40° C with a temperature rise of not more than 90° C at the rated horsepower of the motor.

Insulation shall be NEMA class B with an added process for improved weather protection. Motor windings shall be encapsulated or sealed with epoxy according to NEMA standards by an insulation system such as General Electric “Custom Polyseal” or approved equal. Trade name for added process shall be stamped on the motor nameplate. The motor shall be “high efficiency” rated.

All openings shall be furnished with corrosion-resistant, stainless steel screens. Each motor shall be furnished with 120-volt space heaters which shall operate only when the motor is not running.

STABILIZE ALL DISTURBED AREAS WITH EROSION CONTROL MEASURES SUCH AS VEGETATION, RUNOFF DIVERSION, CHECK DAMS, MULCHING, BLANKETS, BONDED FIBER MATRICES AND VEHICLE WHEEL WASH FACILITIES.

5. SEDIMENT CONTROL:
CAPTURE SEDIMENT TRANSPORTED IN RUNOFF TO MINIMIZE THE SEDIMENT FROM LEAVING THE SITE WITH METHODS SUCH AS SEDIMENT BASINS, SEDIMENT TRAPS, SILT FENCES, SAND BAGS, AND VEGETATED FILTER STRIPS.

6. MATERIAL AND WASTE MANAGEMENT:
PROPERLY STORE TOXIC MATERIALS AND PREVENT THE DISCHARGE OF POLLUTANTS ASSOCIATED WITH CONSTRUCTION MATERIALS.

7. TIMING OF CONTROL MEASURE IMPLEMENTATION:
TIMING OF CONTROL MEASURES SHALL BE IN ACCORDANCE WITH THE APPROVED EROSION CONTROL PLAN. DISTURBED AREAS OF CONSTRUCTION SITES THAT WILL NOT BE RE-DISTURBED FOR TWENTY-ONE (21) DAYS OR MORE WILL BE STABILIZED (GRASSED OR GRAVELED) BY NO LATER THAN THE FOURTEENTH (14TH) DAY AFTER THE LAST DISTURBANCE.

PREPARATION OF REINFORCING STEEL:

1. REMOVE WALL HEAVY RUST AND SCALE FROM THE REINFORCING STEEL BY MECHANICAL MEANS TO ACHIEVE A CLEAN STEEL SUBSTRATE CONFORMING TO SSPC-SP6, COMMERCIAL BLAST CLEANING OR BETTER.
2. IF THE REMAINING REINFORCING IS A MINIMUM OF 80% OF THE ORIGINAL REINFORCING BAR, THEN COAT REBARS with SIKA ARMATECH 110 EPOCEM FOR ANTI CORROSION PROTECTION.
3. IF THE REMAINING REINFORCING IS LESS THAN 80% OF THE ORIGINAL REINFORCING BAR THEN THE EXISTING REINFORCING BAR WILL NEED TO BE REPAIRED. SEE DETAIL C/SR101.

NOTES:

1. SANDBLAST CONCRETE TO REMOVE ALL UNSOUND (LOOSE) MATERIAL.
2. REPAIR AREA SHOULD BE AT LEAST 1/4" IN DEPTH AND THE SURFACE SHALL BE ROUGHENED TO A MINIMUM OF 1/16" PROFILE. THIS INCLUDES THE VERTICAL EDGES OF SAW CUTS. PERIMETER OF REPAIRS SHALL BE CUT IN STRAIGHT LINES AT 90 DEGREE ANGLES.
3. IF ANY REBARS ARE EXPOSED, SEE PREPARATION OF REINFORCING STEEL NOTES AT RIGHT.
4. CLEAN CONCRETE SURFACE. CONCRETE SURFACE SHALL BE SATURATED SURFACE DRY with NO STANDING WATER.
5. APPLY SIKA ARMATECH 110 EPOCEM TO THE CONCRETE SUBSTRATE AS A BONDING AGENT. APPLY THE REPAIR MORTAR BEFORE THE BONDING AGENT BECOMES TACK-FREE TO THE TOUCH.
6. APPLY SIKATOP 122 PLUS POLYMER MODIFIED TROWEL GRADE MORTAR ON THE ROOF SURFACE TO MATCH THE TOP OF THE EXISTING SLAB. REBUILD THE EXISTING CURBS TO THE ORIGINAL HEIGHT.

EPOXY INJECTION OF CONCRETE CRACKS

Comply with the requirements of ACI 503R, ACI 503.2, ACI 501.4 for epoxy resin systems. Fill concrete cracks by pumping an epoxy resin system of the appropriate viscosity for the applicable crack width under pressure into the cracks. Install valves into position along the cracks by bonding in concrete with high viscosity, non-sagging epoxy resin paste mixture. Cracks shall be filled by pumping the epoxy system through the valves. Repair procedures shall be as follows:

1. Rout out each crack along its entire length to a depth of 1/4-inch and a width of 3/8-inch. Vacuum or blow off all dust and particles in the area of the groove.
2. Injection Ports: At intervals of not more than 16 to 20 inches or as recommended by the manufacturer, insert non-corrosive valves at each interval.
3. Crack Sealer: The groove between valves shall be sealed flush with Pro-Poxy 300, or approved equal.
4. Epoxy Injection: After the crack sealer has cured, a tube from a pressure pot containing the low viscosity resin mixture shall be attached to the first lowest valve and the resin mixture pumped into the crack. Use a maximum pressure of 60 psi or less to protect the existing concrete.
5. Injection Progress: As the resin mixture appears in the second highest valve, pinch close the first valve, and attach the tube from the pressure pot to the second valve and commence pumping. Avoid delays in the pumping operation.
1. Injection Completion: After the epoxy mixture has been pumped through all of the valves and the mixture has hardened, remove the valves by cutting/grinding off the valves to 1/8 inch below concrete surface. Coat the areas of the valves flush with Pro-Poxy 300, or approved equal.
2. Finish surfaces to closely match immediately adjacent existing surface texture. Apply cement wash to vertical and overhead surfaces. Allow finish to cure and recoat if necessary.

CONCRETE REPAIR NOTES:

1. REMOVE ALL DETERIORATED CONCRETE UNTIL ONLY SOUND CONCRETE REMAINS.
2. WHERE REINFORCING IS EXPOSED, CHIP CONCRETE AROUND THE BAR SUCH THAT THERE IS A MINIMUM OF ONE INCH BETWEEN THE BAR AND THE SURROUNDING CONCRETE.
3. CLEAN EXPOSED REINFORCING TO BARE METAL.

NOTES:

1. FOR TRAFFIC LOADING APPLICATIONS PLEASE CONTACT INFILTRATOR SYSTEMS TECHNICAL SERVICES DEPARTMENT FOR CURRENT DESIGN AND INSTALLATION SPECIFICATIONS.

SEPTIC TANK OPERATION AND MAINTENANCE NOTES

1. SEPTIC TANKS SHALL BE INSPECTED A MINIMUM OF ONE TIME A YEAR. INSPECTION INVOLVES OPENING THE ACCESS COVER AND CHECKING IF EITHER THE SLUDGE OR SCUM LEVEL IS NEAR THE TOP OF OUTLET TEE.
2. THE SEPTIC TANK SHALL BE CLEANED IF EITHER: A. THE BOTTOM OF THE FLOATING SCUM MAT IS WITHIN THREE (3) INCHES OF THE BOTTOM OF THE OUTLET TEE; OR B. THE TOP OF THE SLUDGE LAYER COMES WITHIN SIX (6) INCHES OF THE BOTTOM OF THE OUTLET TEE.
3. CLEANING THE SEPTIC TANK SHALL CONSIST OF PUMPING OF THE CONTENTS INTO A TANK TRUCK AND HAULING IT TO A STATE HEALTH DEPARTMENT APPROVED POINT OF DISPOSAL. THE SEPTIC TANK SHALL NOT BE WASHED OR DISINFECTED AFTER PUMPING. A THREE INCH DEPTH OF RESIDUAL SLUDGE SHALL BE LEFT IN THE TANK FOR SEEDING PURPOSES.
4. THE INTERIOR OF THE SEPTIC TANK IS A CONFINED SPACE ENVIRONMENT. PERSONNEL SHALL NOT ENTER THE CONFINES OF THE SEPTIC TANK UNLESS PROPER SAFETY PROCEDURES ARE FOLLOWED. THERE IS POTENTIAL EXPLOSION AND/OR ASPHYXIATION (DEATH) HAZARD DUE TO PRESENCE OF GASES.
5. CHEMICAL OR BIOLOGICAL ADDITIVES, ENZYMES AND DISINFECTANTS DO NOT IMPROVE THE OPERATION OF SEPTIC TANKS AND ARE NOT RECOMMENDED. ORDINARY HOUSEHOLD CHEMICALS IN SMALL QUANTITIES WILL NOT ADVERSELY AFFECT THE OPERATION OF THE SEPTIC TANK. DO NOT ALLOW THE INTRODUCTION OF FATS, GREASE, GASOLINE OR OTHER PETROLEUM PRODUCTS, SOLVENTS, PAINT, PAINT THINNER, PESTICIDES, ANTIFREEZE, OR OTHER POISONOUS MATERIAL INTO THE SYSTEM.
6. BULKY OR STRINGY MATERIALS SUCH AS PAPER TOWELS, NEWSPAPER, WRAPPING PAPER, RAGS, DISPOSABLE DIAPERS, SANITARY NAPKINS, TAMPONS, PLASTIC, STICKS, ETC. SHALL NOT BE FLUSHED INTO THE SEPTIC TANK. THESE MATERIALS DO NOT EASILY DECOMPOSE AND WILL RESULT IN CLOGGING OF THE PLUMBING AND DISPOSAL SYSTEM.
7. IMPROPER OPERATION AND MAINTENANCE OF THE SEPTIC TANK WILL CLOG THE SYSTEM PIPING AND ADJACENT SOIL. THIS WILL RESULT IN PREMATURE FAILURE OF THE ABSORPTION BED DISPOSAL SYSTEM. FAILURE OF THE DISPOSAL SYSTEM WILL CAUSE OVERFLOWS AND FLOODING OF THE AREA IN PROXIMITY TO THE DISPOSAL SYSTEM. IF FAILURE OCCURS, COMPLETE REPLACEMENT OF THE DISPOSAL SYSTEM WILL BE REQUIRED.
8. THE SEPTIC TANK CONTAINS A FILTER ON THE OUTLET THAT MUST BE CLEANED WHEN THE TANK IS CLEANED. THIS FILTER IS INSTALLED TO INCREASE THE LIFE OF THE SEPTIC SYSTEM AND SHOULD NOT BE REMOVED.
9. MINIMIZING THE USE OF GARBAGE DISPOSERS AND PRACTICING WATER CONSERVATION WILL INCREASE THE USEFUL LIFE OF THE SEPTIC SYSTEM. IT IS ALSO RECOMMENDED THAT THE MAJOR WATER USING FIXTURES AND APPLIANCES NOT BE OPERATED AT THE SAME TIME (E.G. DISHWASHER, ETC.).
10. DISTRIBUTION BOXES SHALL BE CLEANED TO REMOVE SOLID MATERIAL A MINIMUM OF ONE TIME PER YEAR.

8. DURING THE CONSTRUCTION PERIOD THE CONTRACTOR SHALL BE RESPONSIBLE FOR THE SAFETY OF THE BUILDING AND THE PROTECTION OF ADJACENT PROPERTIES, STRUCTURES, STREETS AND UTILITIES FROM DAMAGE. THE CONTRACTOR SHALL PROVIDE ADEQUATE SHORING, BRACING AND GUYS IN ACCORDANCE WITH ALL NATIONAL, STATE AND LOCAL SAFETY

9. ALL ERECTION PROCEDURES SHALL CONFORM TO OSHA STANDARDS. ANY DEVIATION MUST BE APPROVED BY OSHA

10. THE CONTRACTOR SHALL NOTIFY TANIMURA & ASSOCIATES (PH. 536-7692) AND THE SPECIAL INSPECTOR FOUR (4) WORKING DAYS PRIOR TO POURING CONCRETE OR GROUTING.

FOUNDATION

1. FOUNDATION DESIGN IS BASED ON GEOTECHNICAL ENGINEERING EXPLORATION REPORT TITLED "SITE NO. 1 AND SITE NO. 7 - DHHL MOLOKAI PROJECTS - ISLAND OF MOLOKAI, HAWAII - W.O. 7470-00 - AUGUST 15, 2017" PREPARED BY GEOLABS, INC. THIS REPORT SHALL BE MADE PART OF THESE DRAWINGS BY REFERENCE. A COPY OF THIS GEOTECHNICAL REPORT SHALL BE KEPT ON SITE DURING CONSTRUCTION.

2. THE RETAINING WALL FOOTINGS SHALL BE ON DIRECTLY ON RECOMPACTED ON-SITE SOIL AND/OR NEW COMPACTED FILL MATERIAL. IF DIFFERING SUBGRADE MATERIALS ARE ENCOUNTERED AT THE FOOTING SUBGRADE LEVEL (I.E. HARD BASALT ROCK AND STIFF CLAYEY SOILS) THE BASALT ROCK FORMATION SHALL BE OVEREXCAVATED A MINIMUM OF ONE FOOT AND THE OVEREXCAVATION SHALL BE BACKFILLED WITH COMPACTED STRUCTURAL FILL.

3. FILLS AND ONSITE SOILS SHALL BE COMPACTED TO A MINIMUM OF 95 PERCENT RELATIVE COMPACTION.

3. BACKFILL BEHIND THE RETAINING WALL SHALL BE ON-SITE SOILS OR SELECT GRANULAR FILL MATERIAL. BACKFILL SHALL BE COMPACTED TO BETWEEN 90 AND 95 PERCENT RELATIVE COMPACTION. BACKFILL SHALL NOT BE OVER COMPACTED.

4. ALL FOOTINGS SHALL BE BOTTOMED A MINIMUM OF 24" BELOW THE LOWEST ADJACENT GRADE AND A MINIMUM HORIZONTAL DISTANCE OF 6 FEET SHALL BE MAINTAINED BETWEEN THE BOTTOM EDGE OF FOOTING AND THE FACE OF SLOPE.

5. ALL WATER, MUD AND DEBRIS SHALL BE REMOVED FROM THE BOTTOM OF FOOTING EXCAVATIONS PRIOR TO THE PLACEMENT OF CONCRETE.

6. BOTTOM OF ALL FOOTING TRENCHES SHALL BE LEVEL AND STEPPED ACCORDING TO THE WALL PROFILE AND STEP FOOTING TYPICAL DETAIL. SLOPED FOOTING TRENCHES ARE NOT ALLOWED.

RETAINING WALLS

1. FINISHED GRADING BEHIND THE WALL SHALL BE DESIGNED TO MINIMIZE SURFACE WATER RUNOFF FROM ENTERING THE BACKFILL AREA.

2. 4 INCH DIAMETER WEEP HOLES SHALL BE PLACED NEAR THE BOTTOM OF RETAINING WALLS SPACED AT A MAXIMUM OF 8 FEET ON CENTER. A 1-FOOT THICK CONTINUOUS LAYER OF CRUSHED GRAVEL WRAPPED IN GEOTEXTILE FILTER FABRIC SUCH AS MIRAFI 140N OR SIMILAR SHALL BE PLACED ABOVE THE PIPE AND DIRECTLY BEHIND THE WALL. THE CRUSHED GRAVEL SHALL BE CONTINUOUS BETWEEN WEEP HOLES.

3. A 4 INCH DIAMETER CONTINUOUS PERFORATED DRAIN PIPE (PERFORATIONS FACED DOWN) SLOPED TO DAYLIGHT MAY BE USED IN PLACE OF THE WEEPHOLES. AT LEAST ONE OUTLET SHALL BE PROVIDED FOR EVERY 50 FEET OF PIPE.

4. DRAIN ROCK SHALL CONFORM TO THE FOLLOWING GRADATION:

SIEVE SIZE	% PASSING BY DRY WEIGHT
1-1/2 INCH	90 - 100
3/4 INCH	50 - 100
NO. 4	0 - 50
NO. 200	0 - 5

STANDARD SIZE AGGREGATES NO. 6, 57 AND 67 AND 1-1/2 INCH FILTER MATERIALS SHOULD SATISFY THIS GRADATION REQUIREMENT.

5. WATERPROOFING SHALL BE APPLIED AT THE WALL/ FOOTING CONSTRUCTION JOINT. FLASHING COMPOUND SHALL EXTEND 6 INCHES BEYOND EITHER SIDE OF THE JOINT.

6. BACKFILL SHALL NOT BE PLACED BEHIND CONCRETE MASONRY WALLS BEFORE 21 DAYS AFTER GROUTING THE WALL OR UNTIL THE GROUT HAS ATTAINED A MINIMUM COMPRESSIVE STRENGTH OF 1875 PSI. BACKFILL SHALL NOT BE PLACE BEHIND CONCRETE WALLS UNTIL THE CONCRETE HAS ATTAINED THE 28 DAY DESIGN STRENGTH. COMPRESSIVE TEST CYLINDERS MADE DURING THE CONCRETE POUR SHALL BE TESTED TO DETERMINE THE CONCRETE STRENGTH.
